YESWANTH REDDY CHILAKALA

New York City, 11746 | +12017801872 | yeswanth.986ch@gmail.com | Linkedin

PROFESSIONAL SUMMARY

Security Analyst with mid-level experience delivering secure SDLC and vulnerability management for fintech and event-management platforms. Led integration of security controls into web and mobile applications, cutting identified vulnerabilities by 30% and improving compliance with NIST and PCI-DSS. Conducted comprehensive risk assessments and incident response for high-profile client data, reducing security incidents by 25%. Seeking to apply strong IAM and cloud security expertise to strengthen the organization's security posture.

EDUCATION

Pace University, Seidenberg School of Computer Science and Information Systems **Jan 2024 - Dec 2025**
Master of Science (MS), Cybersecurity *New York City, NY*
•**GPA:** 3.94/4.0

Parul University **Jun 2019 - Apr 2023**
Bachelor of Technology (BTech), computer science and engineering *Vadodara, India*
•**GPA:** 3.2/4

TECHNICAL SKILLS

- **Programming Languages**: Python, HTML, SQL
- **Operating Systems**: Windows, Kali Linux, Ubuntu
- **Security Tools**: Burp Suite, Advanced IP Scanner, Nmap, Metasploit, SET Tool, Wireshark, OSINT, PEView
- **Areas**: Malware Analysis, Network Security, Pen-Testing, OSINT, Secure Architecture, Social Engineering, Access Control, Cryptography, Mobile Device Security, Threat Detection, Security Policies
- **Certifications**: Comptia Security+ (2026) | Google Cybersecurity (2025) | Forage TCS (2025) | Cybersecurity Fundamentals (IBM, 2025) | Introduction to Cybersecurity (CISCO, 2025) | Incident Command System, ICS-100 (FEMA, 2024) | First CVSS 3.1 & 4.0 (FIRST, 2024)

EXPERIENCE

Royal Elite Events **Feb 2026 - Present**
Security Analyst

- Conduct security risk assessments for event management systems, CRM platforms, and client databases (guest lists, contracts, payment information) using the NIST risk framework, and document findings to guide mitigation, helping protect client data and maintain event continuity.
- Implement access control policies and endpoint security measures-including multi-factor authentication and anti-malware tools-to protect VIP client data, monitor devices and networks for phishing or suspicious activity, and secure temporary event Wi-Fi, which has prevented data breaches during live events.
- Perform vulnerability scans with Nessus, recommend remediation actions, support incident response for account compromises, and enforce data-protection policies across staff and vendors, resulting in faster patch deployment and continued compliance with privacy regulations.

CodeDale **Feb 2025 - Feb 2026**
Cybersecurity Engineer *Remote*

- Integrated security best practices into web and mobile application development for fintech and AI platforms, using Python-based authentication libraries and OAuth2, which hardened user login flows and reduced unauthorized-access incidents.
- Applied secure SDLC principles by reviewing application architecture, using the OWASP Top 10 checklist and First CVSS 3.1 scoring to identify vulnerabilities, and collaborated with developers to remediate issues, improving the overall security rating of the projects.
- Supported cloud and DevOps security by auditing access controls with Advanced IP Scanner, monitoring configuration drift in CI/CD pipelines, and implementing role-based access policies, which lowered configuration-related risk alerts.

AR Enterprises Pvt. Ltd. **Jun 2021 - Dec 2023**
Information Security Analyst

- Performed vulnerability assessments on internal systems and web applications using Nmap and OWASP ZAP, identifying security gaps and recommending remediation to reduce risk exposure.
- Implemented Identity and Access Management (IAM) practices including role-based access control (RBAC) and least-privilege policies, and strengthened email security through SPF, DKIM, and DMARC configurations.
- Monitored network traffic and endpoint activity using Wireshark and firewall tools, supporting risk assessments and preparing compliance documentation that enabled successful audit approval for government infrastructure projects.
- Conducted security awareness sessions for internal teams, teaching secure password practices, phishing detection, and proper handling

of sensitive government project data, which increased employee phishing detection rates and reduced credential-related incidents.

Verzeo **Jan 2022 - Mar 2022**

Lead Intern - Cybersecurity Engineer [Internship] *Remote*

- Managed execution of projects for a group of six interns using JIRA and weekly stand-ups, which streamlined communication and ensured all milestones were met on schedule.
- Mentored team members by simplifying cybersecurity concepts and techniques, improving team comprehension by 20%.
- Reduced project turnaround time by 25% through improved project workflows and consistent updates to team members.

PROJECTS

Detecting Phishing Texts using Machine Learning | Link **Jan 2025 - May 2025**

- Combined 57,27 + 10,000 + 11,294 genuine samples from 20 Kaggle sources to build a phishing dataset. Cleaned the dataset using text normalization, stop-word removal, tokenization, and TF-IDF.
- Evaluated 50+ models and found the best one (Accuracy 0.9887, F1 0.9773). Then added the SVM model to a Django web app to categorize items as either Safe or Unsafe.
- Algorithms correctly detected phishing texts phony job scams and financial prompts, including Outlook misclassified emails.

Open-Source Intelligence Risk Assessment of Cisco Systems | Link **Jan 2025 - May 2025**

- Mapped Cisco's DNS records, exposed assets, misconfigurations, and employee footprint by passive OSINT utilizing MXToolbox, Robtex, Shodan, Google Dorking, LinkedIn, and HIBP.
- 525+ publicly accessible Meraki dashboards, 24,000+ Cisco-linked assets on Shodan, out-of-date ASA firewalls, and exposed emails (e.g., info@cisco.com identified in 9 breaches) are examples of actual exposures.
- Uncovered serious security holes, such as CVE-2023-20109 (IOS XE RCE, 9.8 severity) and CVE-2022-20829 (VPN authentication bypass), and outlined mitigation methods such as MFA, metadata scrubbing, and legacy asset retirement.

Malware Analysis Report - Zeus Banking Trojan | Link **Sep 2024 - Dec 2024**

- Examined and recorded the hashes, imports, strings, persistence routes, mutex creation, anti-VM behavior, and keylogging features of an actual Zeus sample (invoice_2318362983713_823931342io.pdf.exe, 247 KB).
- Observed real runtime behavior, including registry persistence at HKEY_CURRENT_USER\SOFTWARE\Microsoft\Windows\CurrentVersion\Run\Google Update and the creation of GoogleUpdate.exe in a hidden location.
- ARP, SSDP, MDNS scans, Flash installer decoy traffic to http://fpdownload.macromedia.com/, and mapped IOC data, including MD5, SHA-1, SHA-256, suspicious APIs, and generated file paths, were all detected.

Implementation of Apache Web Server and a Virtual Private Network on Luna Bags | Link **Sep 2024 - Dec 2024**

- Configured and confirmed Apache Web Server operations in a DMZ (10.9.0.5), as evidenced by the report's Apache status output and successful HTTP responses.
- Established an OpenVPN configuration that, as shown by ping tests and verified server/client logs, enabled DMZ clients to access internal resources (192.168.60.0/24) safely.
- To verify VPN-only access enforcement and encrypted traffic visibility during trials, tested access-control behavior by attempting direct DMZ-to-internal connections.

E-Commerce Security Risk Assessment and Recommendations Report for TonesFashion | Link **Jan 2024 - May 2024**

- Identified more than 25 possible vulnerabilities by doing a thorough risk and threat assessment for a developing e-commerce platform using the NIST 2.0 Framework and PCI-DSS compliance.
- Ensured full GDPR and CCPA compliance by improving data privacy procedures and controls.
- Examined and found possible weaknesses in firewalls, IDPS, segmentation, and network security.
- Implemented role-based access control with multi-factor authentication for improved identity access management and developed recommendations for safe DMZ architecture and vulnerability monitoring.

DND Cyberscams or Secure Web Applications Using (Undergrad Project) | Link **Jan 2022 - Mar 2023**

- To stop OTP-based cyber scams, created a secure banking login system that uses fingerprint and facial recognition instead of OTP verification.
- Trained the model using 3000 face images, 700 multi-pose faces, and 5 use cases to reach 0.999 accuracy.
- Created HTML and Python login flow that reduces false detections using skin-color + AdaBoost and DeepID approaches, allowing access only if the user's live face matches the stored face.
